

versatile fun and distance harness, more lightweight and with smaller pack size than its brother VELVET 2

Velvet 2 Airbag - versatile fun and distance harness, more lightweight and with smaller pack size than its brother VELVET 2

The technical features of the VELVET 2 AIRBAG are the same as the VELVET 2.

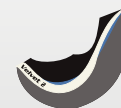

In contrast to the VELVET 2 it has in place of the 17 cm back protection a **stagnation pressure airbag protection system** with lateral air intake, which is produced under the license from Cygnus. This new generation of airbag protection is the culmination of the experience of many years of Woody Valley with stagnation pressure airbags and a whole man-year of work with the crash test machine. These new developments meet both the requirements of the DHV and the European standard. It is an innovative, automatically filling multi-chamber system which also protects the top of the back optimally, beginning from the first phases of take off.

The result is a harness for weight-conscious pilots with clearly reduced pack size - an all round success!

- Material:** Cordura® 500, Camp aluminium karabiners
- Weight:** 4.5 kg
- Certification:** DHV with GET-UP or T-LOCK system
- Crash test result:** 13.8 negative G
- Sizes:** M - L - XL

Colours:

black/grey/milk/blue

black/grey/dark red/milk

Optional extras:

Speed system + 100g

Relax bar + 200g

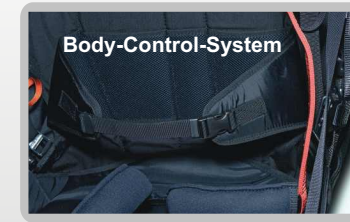

Carbon seat plate - 260g

Instrument holder cockpit and/or front ballast + 500g / + 600g
