

VOYAGER

VOYAGER

converted into rucksack

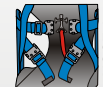

the versatile light harness with integrated rucksack

Voyager - light harness, ideal for trekking, walk-ups or just free-flying

Modern harnesses have to be light. So we complement the Woody Valley product range of light-weight harnesses with the VOYAGER - a special light harness that turns into a comfortable rucksack for all your paragliding gear. Safety, lightness, low volume, comfort and versatility are the distinguishing features of this high-quality product. Using light nylon and Cordura, carbon seat plate and the concept of reversable harness, we managed to keep its weight down to only 3.0 kg.

- ▶ equipped with an airbag, which fulfils the new requirements of the DHV and the European certifications. Once airborne, the reversable rucksack becomes the actual AIRBAG and back protection itself.
- ▶ the special hooks on the back of the rucksack ensure a safe and correct position of the telescopic trekking poles during flight.
- ▶ adjustable seat plate depth
- ▶ side pockets of high-strength net fabric
- ▶ carbon seat plate
- ▶ security card on the right shoulder strap for a fast first aid access in case of emergency
