

dynamic and safety for freestyle and acrobatic pilots

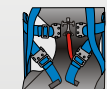

X-Pression - the harness for freestyle and acrobatics

After two years of research and testing, Woody Valley present their first harness designed entirely for acrobatics - the X-PRESSION. The X-PRESSION's revolutionary geometry gives the pilot maximum control of the glider, the stiff back offers protection in the dynamic manoeuvres and many other innovative solutions guarantee top safety and user-friendliness:

- ▶ adjustments that retain their setting also during manoeuvres with high G-forces
- ▶ triangular-shaped leg straps enable the pilot to "pull" the seat board additionally during weight-shift
- ▶ two emergency parachute compartments positioned under the seat board in the pilot's centre of gravity
- ▶ specially-shaped reserve handles reduce the risk of an unintentional deployment of the parachute caused by glider lines
- ▶ effective easy-to-dry materials
- ▶ 14 cm protection
- ▶ draining net for an easier recovery from water
- ▶ smoke bomb attachment under the harness with quick-release hook on the left shoulder strap
- ▶ stiff back
- ▶ tie rope attachments guaranteeing a comfortable seated position in case of emergency parachute deployment, allowing the pilot to open the leg and chest straps easily in case of water landing
- ▶ right shoulder strap pocket for a waterproof acoustic variometer

Material: Cordura® 500 und 300, steel carabiners
Weight: 5.1 kg (without back protection)
System: T-LOCK system
Sizes: M - L - XL
Colours: black/red
Optionals:

Watertight container for emergency parachute

Watertight container for back protection

Speed system
